

# Seeking Healthy Controls for Study on Arm-Hand Function

## What is the study?

- Study of Neurophysiology and Function of the Upper Limb

## Who may participate?

- Individuals ages 18 to 90 years
- Males and Females
- No neurological or cognitive deficits
- Overall healthy individual

## What is involved?

- One study visit lasting 4-6 hours
- Tests include neurophysiologic tests
- Non-invasive recording of brain and muscle signals
- Financial compensation will be provided
- On-site parking is available, and, is free of cost
